

As part of the Phase 1 Masterplan for the University of Salford, a campus wide public realm strategy was developed to integrate the various building projects and delivered a high quality public realm.

Appleyard & Trew worked closely with the design team and appointed landscape designer URS Ltd to prepare budget costings for the initial phase and the future student residence buildings being constructed to the north of the site.

The Phase 1 public realm is currently on site, and has been procured in conjunction with the Gateway project. The approximate value of the initial phase is £3 million and is due for completion in late 2015.
